AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q102803

Application No.: 10/511,549

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph at page 13, between lines 2 and 20 with the following

amended paragraph:

The variation functionally equivalent includes, not only human variations of the

polypeptide consisting of the amino acid sequence of SEQ ID NO: 2 or rat variations of the

polypeptide consisting of the amino acid sequence of SEQ ID NO: 4, but also variations

functionally equivalent derived from organisms other than a human or a rat (such as a mouse, a

hamster, or a dog), and further, polypeptides obtained by artificially modifying these native

polypeptides (i.e., human or rat variations, or variations functionally equivalent derived from

organisms other than a human or a rat) or the polypeptide consisting of the amino acid sequence

of SEQ ID NO: 2 or 164 by genetic engineering techniques, so long as the above definition of

the variation functionally equivalent is met. The term "variation" as used herein means an

individual difference between the same polypeptides in the same species or a difference between

homologous polypeptides in several species.
